

TPT
(TARGET POLYMER TECHNOLOGY)

CANADA

PREDICTABLE Controlled-Release Solutions

Turf Fuel G (TPT) allows turf managers to accurately predict nitrogen release periods as they synchronize with Growing Degree Day models. This provides users with environmental efficient "true nitrogen" uptake only when the plant requires, saving costs. TPT is available for tees, fairways, rough and sports turf/lawns in different longevity options and sizing. The industry's most advanced polymer coated urea. **Teaming up with an iconic technology.**
