

TILLINGHAST CREEPING BENTGRASS

FEATURES

- Excellent turf quality under putting green and fairway management
- Fine textured with a medium-dark green color
- Superior resistance to Dollar Spot, Brown Patch and Pink Snow Mold
- Excellent resistance to Anthracnose and Pythium Root Rot
- High resistance to *Poa annua* invasion
- Early spring greenup
- High density without bentgrass bloat

Tillinghast (DLFPS-AP-3084) creeping bentgrass (*Agrostis stolonifera*) was named for A.W. Tillinghast ('Tillie') a prolific golf course designer/builder in the early 1900's in the northeast and across the USA. This cultivar has demonstrated excellent turf quality under both putting green and fairway management in the 2020 NTEP trials. It is fine textured with a medium-dark green color. Tillinghast shows superior resistance to Dollar Spot (caused by *Clarireedia jacksonii*), Brown Patch (caused by *Rhizoctonia solani*) and Pink Snow Mold (*Microdochium nivale*). In addition, it shows excellent resistance to Anthracnose (*Colletotrichum cereale*) and Pythium Root Rot. Tillinghast has high density without bentgrass bloat which helps make it more resistant to *Poa annua* invasion and easier to manage thatch. The early spring greenup also helps it resist annual bluegrass.
