

CORGWIN™

Premium Organic Fertilizer

**Increases
Leaf Moisture**

**Improves
Rooting**

**Strengthens
Plants**

CORGWIN is a premium organic fertilizer derived from dried citric acid biomass combining Humic Acid, Sea Kelp, and Nutrifense technology. Corgwin evenly feeds the plant while improving soil structure and promotes beneficial microbial activity. (Humic acid and sea kelp have been shown to increase plant moisture content, root mass, and antioxidant production—even under stress.) **Nutrifense®** includes biodaptive compounds, SAR elicitors, salicylic acid, and beneficial plant extracts to enhance plant resilience—especially in the face of heat stress, wear, and drought.
