

DUAL ACTION SOIL
SURFACTANT

Consistent Soil
Hydration

Manages Plant Stress

Lower Rate/
Longer Residual

Infinite™ is the first soil surfactant that includes multiple ingredients, designed to manage both soil moisture, plant stress and recovery. A multiple polymer product, fortified with two novel technologies; DiuTuron and Templar. Patent pending DiuTuron polymer technology, improves the longevity and residual of the product in the soil. DiuTuron allows lower use rates. Infinite also includes Templar, which reduces stress associated from heat and drought through enhancing the plants' natural defense mechanisms. The combination of reduced hydration stress and improved turf defense makes Infinite's performance endless.

FEATURES AND BENEFITS

- Preventative and Corrective Stress Application
- Fast Reduction from Heat and Drought Stress
- Low Use Rate
- Safe on all Turf

Application Instruction:

Golf Greens and Tees: Apply INFINITE at 3-5 fl. oz./ 1,000 ft² every 30 days prior to, or during the occurrence of localized dry spot, plant stress or drought conditions. 14-Day programs can be implemented at 1.5-2 fl. oz. /1,000 ft² with an initial rate of 5 fl. oz. /1,000 ft².

Golf Fairways, Roughs, Sports Fields, Lawns: Apply Infinite every 30 days at 5 fl. oz./ 1,000 ft² every 30 days.

Ensure adequate irrigation or rainfall before next mowing to ensure product is carried into the soil profile.

Consult product label for further details.

turf fuel.com |     

15415 Marquardt Ave., Santa Fe Springs, CA 90670

FEATURES AND BENEFITS

- Increased soil moisture to air ratio
- Enhanced moisture retention and duration.
- Reduce heat and drought stress
- Improves turf recovery

SOIL SURFACTANT

Infinite provides unparalleled reduction in turf stress caused from heat and drought. Infinite uses 5 surfactant components to provide a complex web of soil hydration. Infinite makes soil hydration consistent and predictable, ensuring optimal soil hydration under all conditions.

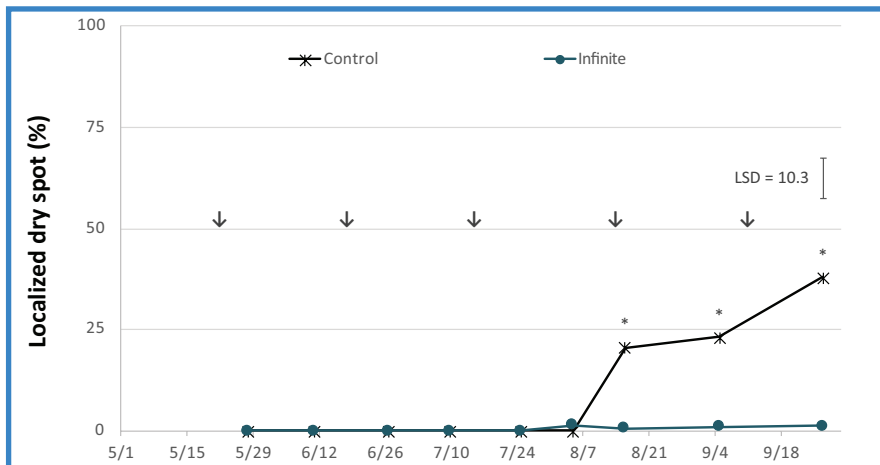

A new patent pending polymer in the Turf Fuel polymer system magnifies performance and enhances stability. Diuturon results in longer performance at lower rates.

Uses two unique components to enhance plant stress tolerance. Templar reduces the affect of heat and drought stress on the plant. Templar defends your Turf.

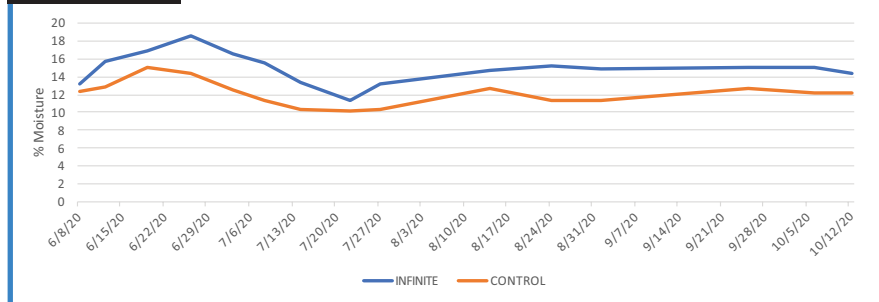

A 2019 trial at University of Arkansas shows Infinite suppressing localized dry spot (LDS) formation.

In field research, Infinite helped maintain greater hydration than untreated control.

2020 INFINITE Soil Surfactant Moisture Trial

This Infinite plot at the 2019 University of Arkansas trial showed noticeably better visual quality compared to other surfactant treatments.
